Please bring “Imagine Tomorrow® Computer Classes for Kids” to our facility!

I learned about these classes on www.littletechie.com. Each class uses technology as a tool to emphasize early literacy skills, enhance creativity, and further develop critical thinking ability. And kids LOVE it!

Little Techie brings the computers, the teachers and the curriculum to each weekly class!

How does Little Techie differ from other computer programs?

- **Philosophy:** The philosophy of Imagine Tomorrow® is completely different from other programs. The purpose is to teach children to become better thinkers, learners and creators, while using technology as a tool.
- **Software:** No other competitor has their own proprietary software. Imagine Tomorrow® has their own custom designed software for each lesson which integrates the latest in digital/mobile concepts while reinforcing preschool and kindergarten academic skills and literacy skills. Imagine Tomorrow® takes its software one step further by posting reinforcing activities and information about each lesson on the Little Techie website for children and parents to continue the activities at home.
- **Ratio:** Typically, in other computer enrichment programs at schools, children must share the computer. With our program, children will always work on their own individual brand new laptop while working at their own academic and technical pace.

**Portable classes at
your school or facility!**
